

What is claimed is:

1. A wrapping/filling method, comprising:

connecting a computer of said client having a request condition to a server computer having a wrapping/filling condition database via the Internet, when a client requests wrapping/filling of a commodity;

obtaining wrapping/filling information of said client, which is appropriate for said request condition and said wrapping/filling condition;

transmitting said wrapping/filling information from said server computer to said wrapping/filling device according to a request from said client computer; and

filling a commodity content according to said wrapping/filling information by said wrapping/filling device and wrapping the same by a wrapping vessel according to said information.

2. The wrapping/filling method according to claim 1, wherein the wrapping vessel according to the wrapping/filling information is selected from paper vessel, bottle, can and plastic vessel.

3. The wrapping/filling method according to claim 1, wherein said commodity content according to the wrapping/filling information is selected from liquid foods, fluid foods and dry foods.

4. The wrapping/filling method according to claim 1, wherein in said wrapping/filling device, the design printed on the outward surface of said wrapping vessel is included in said wrapping/filling information.

5. The wrapping/filling method, comprising in a wrapping/filling device, filling a commodity content according to the following wrapping/filling information and wrapping the same by a wrapping vessel according to said information:

the wrapping/filling information of a client, which is appropriate for the request condition and the wrapping/filling condition obtained by connecting the computer of the client having a request condition to the server computer having a wrapping/filling condition database, when the client requests wrapping/filling of the commodity via the Internet, the

wrapping/filling information being transmitted from the server computer to the wrapping/filling device according to the request from the client computer.

6. The wrapping/filling method, comprising filling a commodity content according to the following wrapping/filling information and wrapping the same by the wrapping vessel according to said information:

the wrapping/filling information of a client, which is appropriate for a request condition and a wrapping/filling condition obtained by connecting the computer of the client having said request condition, who requests the wrapping/filling of the commodity, to the server computer having said wrapping/filling condition database via the Internet, the wrapping/filling information being transmitted from said server computer to said wrapping/filling device according to the request from said client computer.

7. The wrapping/filling device according to claim 6, comprising a transmission part transmitting the wrapping/filling signal of said wrapping/filling device to said server computer, wherein said wrapping/filling signal is transmitted from said server computer to the computer of said client.

8. The method for providing wrapping/filling, comprising:

offerring a wrapping/filling condition via the Internet by a server computer having a wrapping/filling condition database when a client having a request condition requests wrapping/filling of the commodity;

transmitting wrapping/filling information of the client, which is appropriate for said request condition and said wrapping/filling condition, from said server computer to a wrapping/filling device according to the request from a client computer;

filling a commodity content according to said wrapping/filling information by the wrapping/filling device and wrapping the same by a wrapping vessel according to said information.

9. A commodity management method, comprising in a wrapping/filling device, comprising:

receiving a part of or all of result information obtained by filling a commodity content according to the following wrapping/filling information, and by wrapping the same

by the wrapping vessel according to said information by the computer of the provider of said wrapping vessel and/or content through a server computer; and

analyzing said wrapping vessel and/or the supply trend of the content and the inventory control to perform the commodity management from said result information:

the wrapping/filling information of a client, which is appropriate for the request condition and the wrapping/filling condition obtained by connecting the computer of the client having a request condition to the server computer having a wrapping/filling condition database, when the client requests wrapping/filling of the commodity via the Internet, the wrapping/filling information being transmitted from the server computer to the wrapping/filling device according to the request from the client computer.
